## Installations Accessory for Led mirror light

### Horizontal Installation

Normally, holder A can be installed horizontally on surface, such as the top surface of mirror cabinet and bathroom mirror frame. This holder is to be installed easily. It is the most popular application.

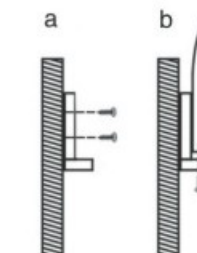

### Wall Installation

Holder B is customized to install on the wall.

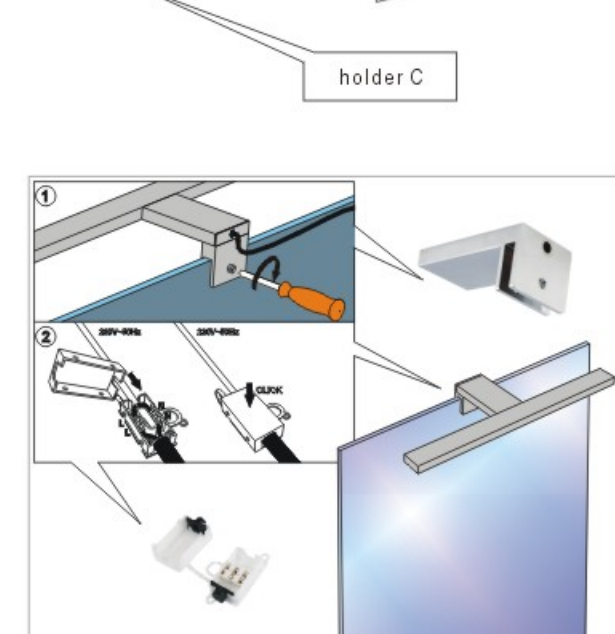

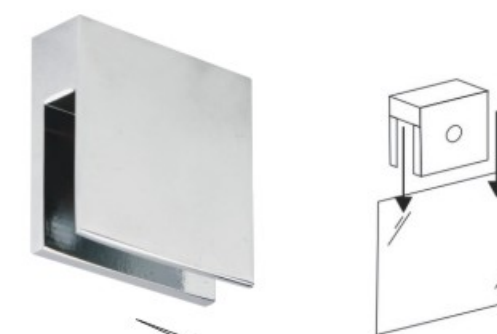

Slim and fashion design:

- a. Firstly, the holder can be fixed on the wall with two screws
- B. The light can be fixed on the surface of holder

### Clipping Installation

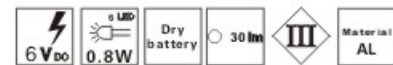

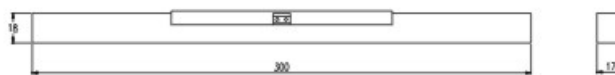

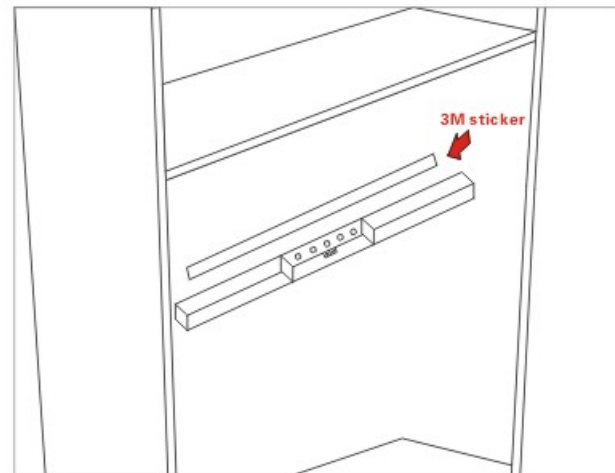

Holder C can be clipped on mirror directly. The holder is fixed by a screw which is in the middle of holder. Convenient installation and demolition.

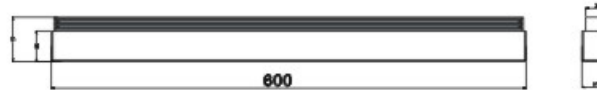

## DRE004

Fixed by soft magnetic stripe(3M sticker) or magnet(screw)

Touch switch for mirror

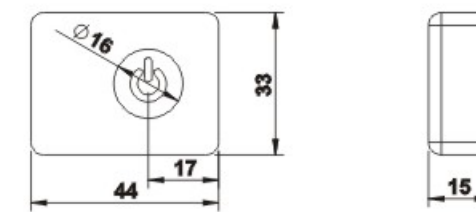

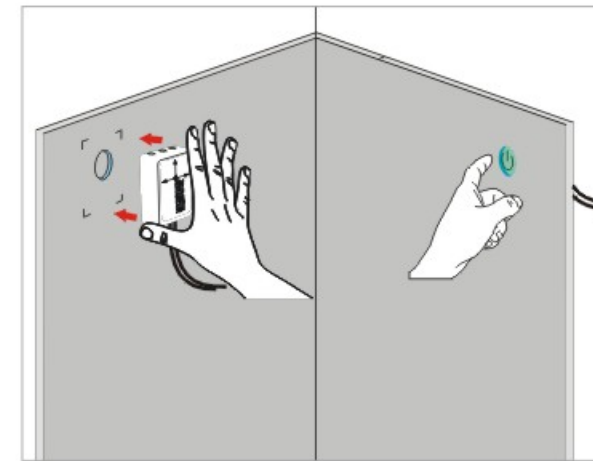

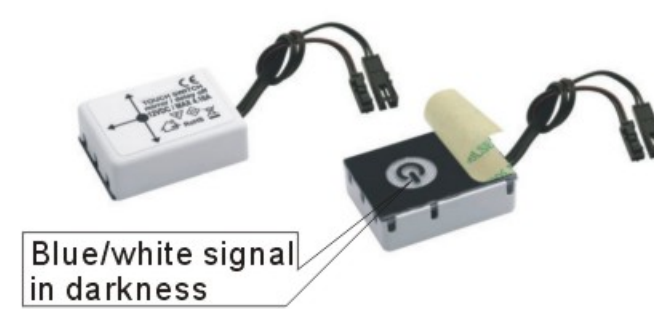

155\*85\*15mm Blue Signal, to be found easily in darkness

This sensor switch is to applied at the back of mirrors. Firstly, one needs to eliminate mercury and form one pattern within the size of 23\*43mm, at one proper position of the mirror. The pattern could be one circle, one switch sign, company's logo, or any other suitable pattern. Secondly, attach the switch at the back of this pattern. After turning on, the switch will emit blue light which goes through the pattern and paint one fluorescent modern blue pattern on the mirror. There are sensor-touch system and driver inside the box. Ip44 certified with excellent safety.
